# High intensity

*With the EMSCULPT® Small Contour Applicator, BTL has further refined its game-changing non-invasive fat-busting technology*

THE AESTHETICS GIANT BTL HAS long been a bringer of good news to cosmetic treatments – and now that news has got better still. As one of the world's major manufacturers of medical and aesthetic equipment, BTL has already revolutionised the most advanced non-invasive solutions for body shaping, skin tightening and other medical aesthetic treatments. BTL is a strong believer in the fact that actually no one is Barbie and Ken – but everybody deserves to be confident and rock their catwalk of life.

So many people worldwide have benefitted from such BTL technologies as EMSCULPT®,

EMSELLA®, Vanquish ME®, Exilis ULTRA® and Unison®. Yet BTL's ongoing quest for improved refinements to these non-invasive treatments never stops. Now the sculpting power of EMSCULPT® can be extended to the arms and legs, with BTL's new EMSCULPT® Small Contour Applicators.

It truly is a key breakthrough, raising the bar yet further on EMSCULPT®'s already game-changing status as the only procedure to help both men and women build muscle and burn fat. The EMSCULPT® Small Contour Applicator brings those unrivalled EMSCULPT® results to even more key muscle groups, making it the only non-invasive fat treatment which is safe to tone and strengthen the arms and calves as well.

Since launching EMSCULPT®, BTL has seen growing demand from physicians and patients to bring the technology to other tough-to-target areas of the body. The Small Contour Applicator delivers that targeted treatment via a unique ergonomic design and adjusted energy field.

Four 20-minute treatments over the course

of two weeks represent the shortest procedure currently available for this non-invasive muscle strengthening. The new Small Contour Applicator and the EMSCULPT® Large Applicator possess the highest intensity, delivering the greatest energy in the specific areas to be treated.

Dr Tracy Mountford, founder and medical director of the multi-award-winning Cosmetic Skin Clinic® with clinics in both London and Buckinghamshire, has over 25 years' experience in non-surgical aesthetics including body recontouring. She would not be without EMSCULPT® at her clinics, and will be among the first to offer patients the new sculpting gains to be had from the Small Contour Applicator.

'Successful cosmetic treatments are all about keeping people guessing "has she or hasn't she?'" says Dr Tracy. 'Some of the most beautiful women in the world look like they have had nothing done... they just look stunning; this is our mantra. The only people who should know the answer to that question are your cosmetic doctor and you.'

The EMSCULPT® experience feels like an intensive workout – but you can lie down and relax during it! As it's non-invasive, it requires no pre-treatment preparation and requires no recovery time. You will begin to feel tangible results right after the treatment. Positive results are usually reported two to four weeks after the last session and continue to improve for several weeks following the treatment.

The EMSCULPT® Small Contour Applicator is yet further evidence of BTL's

*'Some of the most beautiful women in the world look like they have had nothing done... They just look stunning'*

focus on real results for real people. No matter your skin type or whether your BMI is higher than 30, they have customised solutions for you. BTL is committed to helping individuals look and feel their best by offering treatments that are quick, comfortable, affordable – and proven. To BTL, every body matters.

With the EMSCULPT® Small Contour Applicator, BTL has created another way to sculpt a new you.
