

NEW PRO 200+

AMPLIFY YOUR TRAINING PROGRAM WITH STRIDE SMART™ TECHNOLOGY

- Automated workout programmer is your “extra set of hands” in the training room
- Use AlterG data to show measurable progress to motivate your athlete
- Give your athlete visual insight to their mechanics

Promoting Peak Performance

The AlterG® Anti-Gravity Treadmill® Pro 200+ uses NASA's innovative differential air-pressure technology to provide unweighting with an unparalleled level of precision. Users can achieve up to 80% reduction of full body weight, and adjust their weight in 1% increments, providing a truly customized and dialed-in work out and rehab experience.

- Start rehab sooner following injury or surgery
- Undertake more challenging rehab programs, helping achieve better results and return to competition quickly
- Increase training volume, without increasing risk of injury
- Maintain, and even gain fitness while rehabbing
- Give your training staff the advantage of the best technology
- Keep your athletes engaged and motivated with objective, data-driven feedback

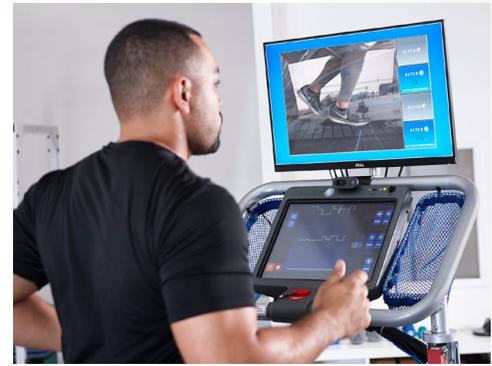

STRIDE SMARTER: The Next Generation of Anti-Gravity Technology

Instant Feedback, Better Results

The Stride Smart Video System provides a comprehensive, live view of your athlete's stride.

Show your athletes stride mechanics they can't see or feel for themselves:

- Record and playback 10-second clips, both in normal speed and slow motion
- Prevent bad habits or future injuries by seeing and correcting deficiencies in real time
- Toggle between 3 different high speed digital cameras: front, lateral, and rear views
- Analyze and view gait mechanics on a 24" monitor

Train Smarter, Train Better

The Pro 200+ is now outfitted with the new Stride Smart System, providing a comprehensive workout and feedback experience for both athletes and trainers. Current Pro 200 models can be retrofitted with Stride Smart too!

The Stride Smart Workout Programmer allows you to write and run automated workouts for your athletes:

- Create personalized interval workouts: vary the speed, bodyweight, and incline to suit the needs of each unique user
- Reduce the supervision needed for each athlete, it's like an "extra set of hands" in the training room
- Automated workouts can be adjusted in real time
